

## **Hello & Welcome to EMPRESAS**

**EMPRESAS** is a state of the art ERP.

**EMPRESAS** is a web based robust and secured solution (100%) built in Bangladesh with complete support services.

**EMPRESAS** currently integrates 12 major business components categorized under Departmental Operations components, High Level Management Components and Enterprise Administrative Component. The operations components are HRM, Inventory, Sales, Procurement, Accounts, Payroll, Marketing & Document Library. The Management Components are: Messaging, Alerts & Dashboard. And Administration Component is User & System Configuration & Administration.

The well thought out features, work flows and tabular/graphical reports are an outcome of our in depth knowledge in accounting principles, practical large scale industrial operations management, expertise in technology product development and legal business requirements in Bangladesh.

### **The high level business benefits that our clients can expect out of EMPRESAS are**

- Better business performance management based on dashboards and Key Performance Indicators.
- Focused and consolidated reports accessible from anywhere in the world.
- Built-in multi-branch, multi-company, multi-currency support.
- Stronger financial management based on trends and Analytics.
- Effective collaboration among all departments and stakeholders.
- Effective management of receivables and payables based on standard practices.
- Effective coordination between budgeting and operational needs.
- Effective bank & cash flow and working capital management.
- Improvement in decision making at all levels of your operation.
- Streamlined operation and reporting for better business practices.

**EMPRESAS** is built on the Microsoft ASP.NET platform which is Microsoft's flagship platform for web applications delivery. It uses the world class Microsoft SQL Server as its database engine. Microsoft has invested heavily in both of these platforms.

In **EMPRESA**, we take full advantages of this Microsoft's capabilities built into ASP.NET and SQL Server which makes this ERP an extremely robust, scalable and secured product. As Microsoft adds on more capabilities to ASP.NET and SQL Server, EMPRESAS is in line to take full advantages of them and roll out new upgrades to our customers.

**EMPRESA** is based on the latest web technologies. Therefore, you can access your server from anywhere in the world as long as you have an account in the system and your server is accessible. You do not need to install the product in every PC (workstation) that is going to use the ERP. All you need is a web browser and an internet connection that will access the one server that will host the solution. Therefore, cost of workstation management is minimized. If a workstation goes down because of a hardware failure or a virus attack, your operation does not have to suffer.

**EMPRESA** has a built in error detection engine. As it finds an error it automatically logs it. You can choose to have the log emailed to us so that we can take proactive measures to fix it. Or, you can choose to log an issue directly in our issue tracking system and someone will get back to you shortly. You can also call the helpline and someone will take you through the issue management system.

We have built **EMPRESA** with our customers in mind. Customer is a key stakeholder in the designs and delivery of **EMPRESA**. We encourage our customers to send us their ideas so that we can provide useful updates to the product. We hope that in the days, weeks and months to come **EMPRESA** will be a more powerful product than it already is right now. And, we hope that our customers will be even more benefited from this installation than they can be right now.
